

SM Grease Pump

In General

We offer air-powered lubricators for grease and oil lubricants. Models are available to handle different levels of volume

Application

The lubricating oil is released during the forward stroke and all of the positive displacement injectors are actuated. With a check valve, this also prevents pressure from building up on the return stroke.

Parameter

Reservoir	2L
Discharge	8cc/stroke
Pressure ratio	18:1
Pressure	4MPa-15Mpa
Maximum stroke per min.	8 stroke/min
Lubricant	#000-NIGL #2
Level switch	option
Lubrication System	Injector
